

Sustainable Worm Control As New Path to Profitable Farming

Views from Farmers and Veterinarians

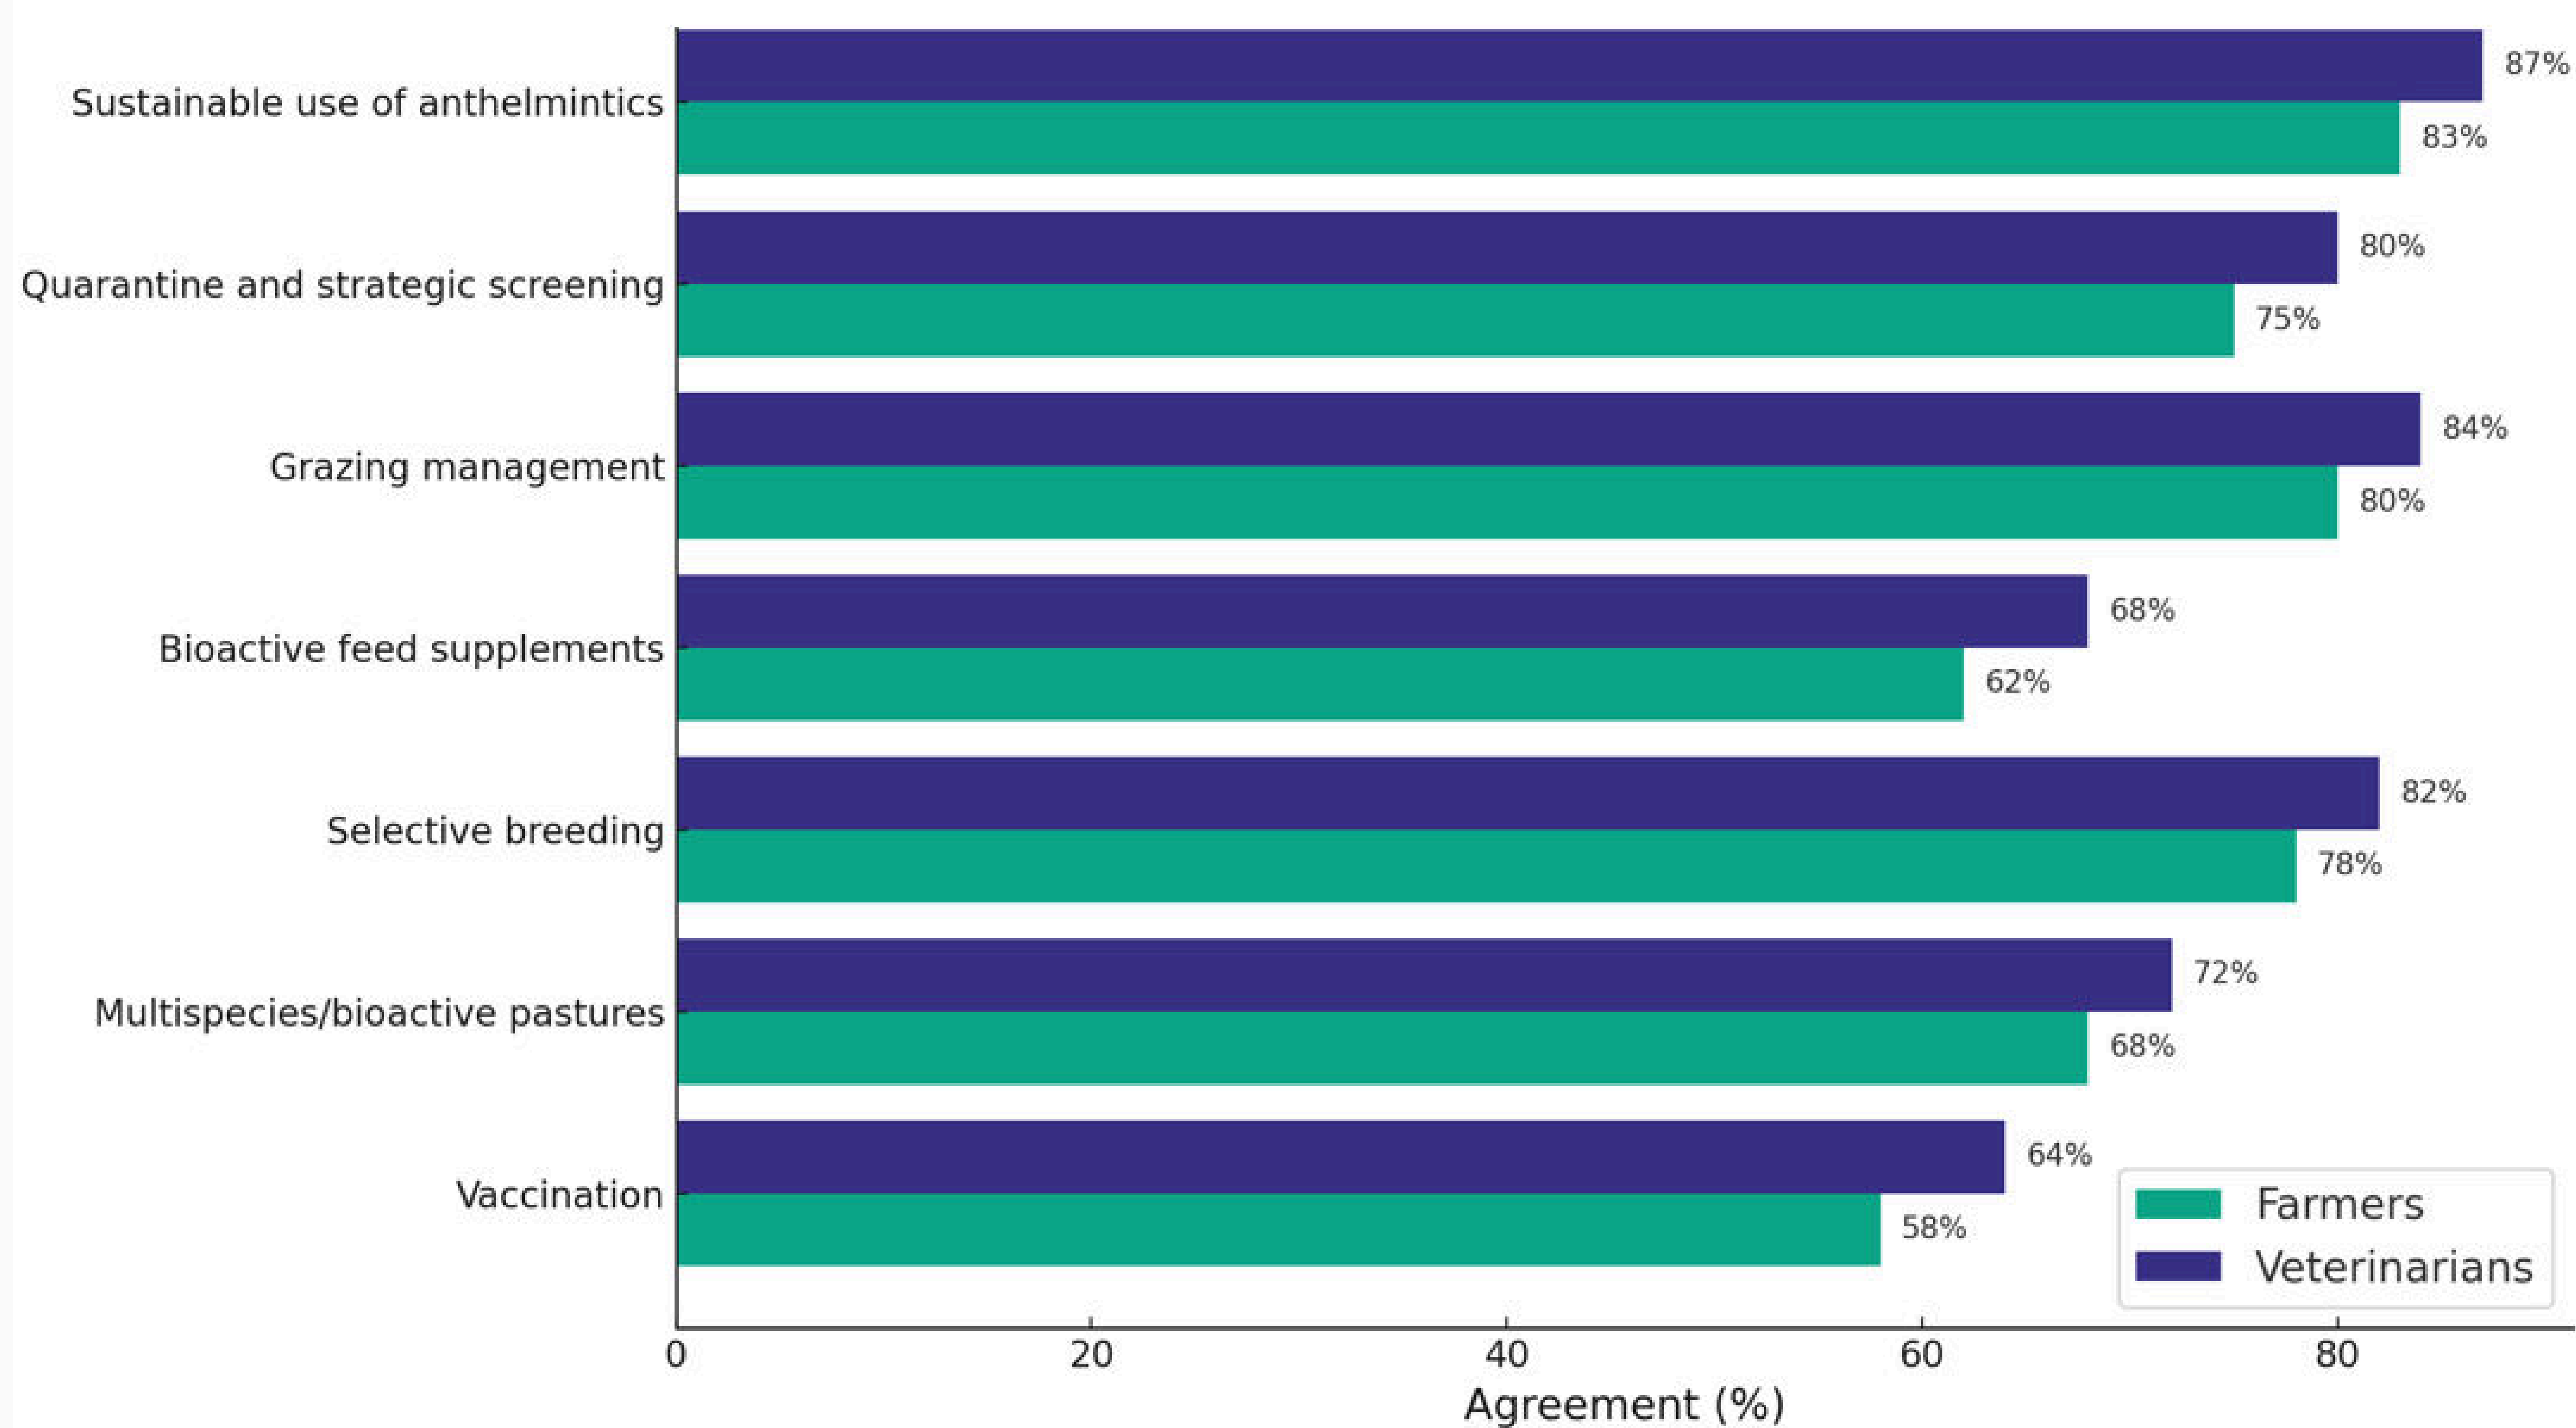

Sustainable PARasite Control in Grazing Ruminants

In February–March 2025, a total of 932 participants from 12 countries, including farmers and veterinarians completed an online survey. They shared their views on various Sustainable Worm Control (SWC) practices and the economic challenges associated with their implementation. The majority of stakeholders (93.8%) agreed that adopting SWC practices can improve farm profitability. This trend was consistent between farmers and veterinarians, reflecting a shared confidence in the value of these practices.

Summary of the stakeholder economic perception on different SWC strategies

Message to stakeholders:

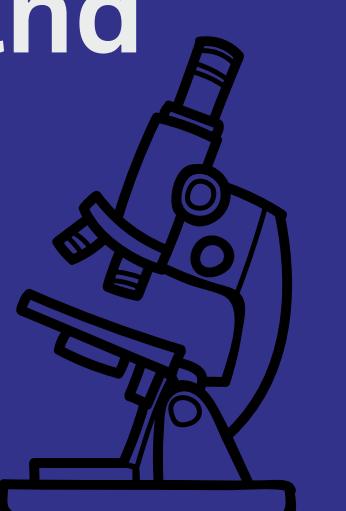

To Farmers:

“You can reduce costs and improve herd health by adopting smarter, more targeted worm control practices.”

To Veterinarians:

“Your guidance is key in helping farmers implement sustainable practices that protect both animal health and welfare and long-term productivity.”
